Worcester Lawn Seed

seed can be made.

The Worcester Lawn Seed is our own mixture made from a formula which has been given a great deal of careful study and we are positive that no better general purpose lawn seed can be made. **Price: Lb., 50c; 2 lbs., \$1.00; 5 lbs., \$2.25; 10 lbs., \$4.25; 100 lbs., \$40.00.**

Green Hill Lawn Seed

60c; 5 lbs., \$2.75; 10 lbs., \$5.25; 100 lbs., \$50.00.

This is composed of only four varieties of grasses as follows: Creeping Bent, Rye Grass, Kentucky Blue and Red Top. These are four of the best lawn grasses known. **Price: Lb., 60c; 5 lbs., \$2.75; 10 lbs., \$5.25; 100 lbs., \$50.00.**

Truegreen Lawn Seed

This is a mixture of three of the best so-called lawn grasses and is adapted to almost any ordinary situation. **Price: Lb., 35c; 5 lbs., \$1.60; 10 lbs., \$3.00; 100 lbs., \$28.00.**

Shady Spot Lawn Seed

It is possible to produce a lawn under almost any condition but to do this in a situation where shade predominates the greater part of the time is very difficult. A shady location requires special treatment of the soil and in almost every shady spot lime must be added, but most important is the selection of the seed. **Lb., 65c; 5 lbs., \$3.00; 10 lbs., \$5.50; 100 lbs., \$50.00.**

Worcester, Mass., is noted all over the country for its fine lawns. We point with pride to the fact that our grass seeds have played an important part in making these splendid grass-plots.

Golf Course Mixtures

Cemetery Mixture

Bank and Terrace Mixture

It is mixed from grasses which naturally grow a strong, creeping root and are very valuable in holding the soil in place, preventing serious washouts during heavy rains. The seed starts quickly. **Price: Lb., 55c; 2 lbs., \$1.10; 5 lbs., \$2.65; 10 lbs., \$5.00; 100 lbs., \$45.00.**

ERRORS—We use the utmost care in filling orders, yet in the press of business, errors sometimes occur in which event we wish to be promptly notified of the fact and will make such corrections as will be satisfactory.

Most of the failures with seeds, plants and bulbs are due to causes entirely beyond our control such as unfavorable weather or soil conditions, too deep or too shallow planting, which renders it impossible for us to guarantee success, and although we take all possible care to supply only such goods as will under proper condition, produce satisfactory results,—The Ross Bros. Company gives no warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs or plants it sells and will not be responsible for the crop.

Sweet Clover

The Greatest Soil Renovator, Hay and Pasture Crop

BOKHARA OR SWEET CLOVER (*Melilotus alba*). A native of all parts of the United States and Canada. It is an erect branching biennial plant with woody stems growing the first season 2 to 3 feet high and developing a large root. The second year's growth usually reaches a height of 4 to 7 feet. HAY AND PERMANENT PASTURE

The Worcester Special Mixtures of Grass Seed produces wonderful hay crops and pasture, maintaining its cropping qualities for years.

PERMANENT PASTURE MIXTURE FOR MEDIUM SOIL. Aside from permanency, an important requisite is that of continual growth from early spring until fall, and as many varieties as possible should be used which bear constant tramping and continued close grazing. This mixture is prepared with these ends in view. Contains Ladino and White Dutch clovers. 30 pounds to the acre. Lb., 45c; 10 lbs., \$4.10; 100 lbs., \$38.00.

PERMANENT MOWING MIXTURE FOR MEDIUM SOIL. This mixture will produce at first cutting a larger crop and a much heavier aftermath of hay, which, though not like timothy, salable in cities for feeding horses, is, nevertheless, superior for feeding to both cattle and horses. Contains clover. 30 lbs. to the acre. Lb., 40c; 10 lbs., \$3.50; 100 lbs., \$32.00.

No. 1 GRASS SEED MIXTURE. For seeding down use 25 lbs. to the acre. Contains Timothy, Red Top, Medium Red Clover, and Alsike Clover. All domestic seed. Lb., 20c; 10 lbs., \$1.60; 100 lbs., \$14.00.

ALSIKE OR SWEDISH CLOVER (*Trifolium hybridum*). One of the best for mixing with timothy; it is perfectly hardy in every climate or soil condition and seldom has to be re-seeded. Lb., 30c; 10 lbs., \$2.10; 100 lbs., \$19.25.

CRIMSON CLOVER (*Trifolium incarnatum*). This is used principally for soiling or green manuring, for which purposes it is highly valuable. If desired for feed, cut it just before it flowers. Lb., 25c; 10 lbs., \$2.25; 100 lbs., \$20.00.

LADINO CLOVER FOR LOW WET SOILS. It is an ideal pasture plant for cattle, sheep, hogs, etc. Should be sown in early spring or September, using Oats, Timothy or Rye Grass, as a nurse crop. We recommend about 4 lbs. of Ladino clover per acre. Price, 95c per lb.

MAMMOTH RED CLOVER (*Trifolium pratense perenne*). Sometimes called Sapling or Pea Vine Clover and English Cow Grass. This differs from the "Medium," being of a ranker growth and yielding more fodder per acre. Lb., 30c; 10 lbs., \$2.25; 100 lbs., \$20.50.

MEDIUM RED CLOVER, AMERICAN GROWN (*Trifolium pratense*). More widely known and used than any other; used principally for hay purposes. Height from 18 inches to 2½ feet. Sow early in the spring or in the late summer. Lb., 30c; 10 lbs., \$2.10; 100 lbs., \$19.25.

WHITE DUTCH OR LAWN CLOVER (*Trifolium repens*). This is valuable for pasturage as well as for lawns; it succeeds where other clovers and grasses fail, and it seldom dies out. It can be sown at all seasons, although early spring is best. ¼ lb., 25c; ½ lb., 45c; lb., 80c; 10 lbs. or over, 78c per lb.

Nod-O-Gen is a high quality jelly or humus culture of nitrogen-gathering bacteria containing all the essentials for healthy bacterial growth. Nod-O-Gen causes nodules to develop on the roots of legume crops. These nodules gather nitrogen from the air and convert it into plant food, saving plant food in the soil. Ross Best Grimm Alfalfa

Alfalfa - Dependable Varieties

The Farmer's Hay Insurance

Sow 15 to 25 lbs. per acre.

As a soil builder the Experiment Stations tell us that it adds twice as much nitrogen to the soil as the average acre of Red Clover.

COMMON. Requires well-drained land and an abundant application of lime previous to sowing. August is the best time to sow. Lb., 35c; 25 lbs. or over, 30c per lb.

GRIMM. Only a few strains of Alfalfa equal, and none excel true Grimm Alfalfa in hardiness. It is the safest type to sow wherever there is trouble from winter-killing. Lb., 40c; 25 lbs. or more, 34c per lb.

Vetch

SPRING VETCH OR SPRING TARE. Grown for soiling, or sown with oats for feeding green. Sow, if alone, 100 pounds to the acre. Lb., 15c; 10 lbs. or over, 10c per lb.

WINTER, SAND OR HAIRY VETCH (*Vicia villosa*). For fall sowings we advise mixing with Mammoth Red Clover or Rye, these giving a support for the vines. Sow, if alone, 60 pounds to the acre, or with Rye, 45 pounds of Vetch and 30 pounds of Rye to the acre. Lb., 22c; 10 lbs., \$1.70; 100 lbs., \$16.00.

Wheat

MARQUIS (Spring Wheat). It has outyielded all other spring Wheats grown under the same conditions of soil and climate, the increased yield being up to 10 bushels per acre; is flinty and dark in color, being almost dark red. It is a beardless variety, having a smooth, yellow chaff. Pk., 70c; bu., \$2.50.

WHITE (Winter Wheat). Sow early in the fall for a good firm root to survive our New England winters. Winter Wheat makes an excellent green feed, coming very early in the spring and staying in condition for feed much longer than spring or winter rye. A productive, bald, white variety, large and plump. Ask for price.

**Use Inoculation For All Legumes—
It Pays**

IMPORTANT SEED OATS

A change of Seed Oats is necessary and the seed should be renewed at least every second or third year. Oats grown on the same soil, year after year, deteriorates and soon becomes light, chaffy and unprofitable to grow.

Rye

SPRING RYE. True stock Spring Rye makes an excellent crop where winter grain has been killed out, or for sowing where a fall crop has not been planted. If desired it can be turned under and made to answer a good purpose in adding to the fertility of the soil. Sow seed same time as other spring grain. Pk., 70c; bu., \$2.50.

ROSEN WINTER RYE. Rosen Rye produces a strong vigorous straw and stools to a remarkable degree. The grain is large, plump, heavy and of beautiful color, commanding a premium on the market over other grains. Owing to its vigorous stooling property less seed is required, the practice being about one and one-half bushels per acre. Ask for price.

Selected Seed Oats

NORTHWESTERN. Extra re-cleaned seed. Briefly described, the Oat is pure white in color; the hull is thin and the kernel large and plump; straw is stiff and strong enough not to lodge. A remarkable root development makes the Northwestern Oat a good drought resister—a special feature on light soils. Pk., 35c; bu. (32 lbs.), \$1.20; 3 bus. and over, \$1.15 per bu.

Field Seed Corn

For the protection of the planter, Eureka comes put up in trade-marked bags and our suggestion is that you accept your Eureka Seed Corn in no other package.

Hardy and rugged characteristics; Eureka Corn germinates surprisingly well in cold, wet springs, and today farmers everywhere heartily approve planting the Ross Genuine variety of Eureka Corn. $\frac{1}{2}$ pk., 55c; pk., \$1.05; $\frac{1}{2}$ bu., \$2.00; bu., \$3.75.

Worcester County Sweepstakes

Grow 12-15 feet tall.

It is a big yellow Dent Corn, stalks very large, $1\frac{1}{2}$ to 2 inches in diameter, growing 12 to 15 feet high; foliage is long, broad and heavy, starting well down to the ground with an abundance of leaves and produces 15 to 25 tons per acre. $\frac{1}{2}$ pk., 55c; pk., \$1.00; $\frac{1}{2}$ bu., \$1.90; bu., \$3.50.

Westbranch Sweepstakes

Matures in 100 days.

One of the finest for silage, the stalks grow 10 to 12 feet high and are completely covered with leaves. The ears are 12 to 15 inches long and 14 to 18 rows. The color is yellow shaded with red. Mature in 100 days. $\frac{1}{2}$ pk., 55c; pk., \$1.00; $\frac{1}{2}$ bu., \$1.90; bu., \$3.50.

Ross' Hybrid Sweepstakes

For Ensilage and Husking

A hybrid obtained by combining different inbred strains of Dent Corn. It makes a quick vigorous growth, producing the maximum amount of feed possible in a short season. Its tall, thick stocky stalks stand up in storms that blow other varieties down. Leaves wide, close together and stay green after the ears ripen. It has yielded as high as 29 tons of silage per acre here in New England. $\frac{1}{2}$ pk., 85c; pk., \$1.50; bu., \$5.50.

Varieties That Fill the Silo With Extra Good Yields

Eureka Corn

Improved Leaming

It ranks as one of the early dent corns, has a very heavy stalk, growing 12 to 13 feet high and very leafy. The ears are 8 to 10 inches long, filled with medium sized but deep kernels. Pk., 70c; bu., \$2.40; 10 bus. or over, \$2.30 per bu.

Sweet Fodder

Best Yellow Varieties

Bantam Evergreen (Yellow). A yellow variety maturing about 10 days after the Golden Bantam and a week earlier than the Stowell's Evergreen white. It has an ear three times the size of Golden Bantam and runs 12, 14 and 16 rows to the ear. The stalk is about 6 feet tall and is perhaps 1 foot shorter than Stowell's Evergreen and 2 feet taller than Golden Bantam. The Bantam Evergreen has the tender and sweet qualities of the Golden Bantam and combines the quality of the Golden Bantam with the productiveness of Stowell's Evergreen. As a table variety it is unexcelled. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 22c per lb.

Improved Bancross Outstanding variety, very heavy producer, large eared and about five days earlier than Golden Cross Bantam, having all of the qualities of the Bantam and in addition, earliness and larger size. We are inclined to think that this variety will soon be a rival of Golden Cross Bantam. Pkt., 15c; lb., 40c; 2 lbs., 75c; 10 lbs. or over, 30c per lb.

Golden Sunshine Sweet Corn

Market Hybrid
Exceptionally Vigorous and Blight Resistant

***Golden Cross Bantam** Introduced jointly by the U. S. Dept. of Agriculture and Purdue University Agricultural Experiment Station. Excellent for market gardeners. Highly resistant to Stewart's disease and very prolific. Stalks sturdy, with exceptionally broad, dark green leaves. Ears 10 to 14 rowed, slightly lighter yellow than Golden Bantam. Golden Bantam A favorite with all who have grown it. The most famous Sweet Corn in the world today. It is the richest and sweetest of all varieties of Sweet Corn. Golden Bantam is dwarf, the stalks are usually 5 to 6 feet high, and the foliage is short, allowing it to stand closer together in the small garden and thus produce a large crop on a small area. We recommend planting Golden Bantam every ten days during the planting season and you will be assured of a continuous supply of the best Sweet Corn. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 22c per lb.

Golden Giant This is a cross between Golden Bantam and Howling Mob. Winner of the silver award for novelty excellence at Massachusetts Horticultural Show. Golden Sunshine The value of this variety lies in the fact that it matures several days in advance of the well-known Golden Bantam. The ears are very compact, about the same size of Golden Bantam, but more refined in appearance, having from 10 to 12 rows of grain. It is a very rapid grower. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 22c per lb.

***Market Hybrid** Outstanding Qualities—One of the Best Extra Early Hybrids. Market Hybrid, according to trials this year, was about a 70- to 72-day corn, stalks about the height of Golden Early Market, 4 to 4½ feet; ears 6 to 7 inches long, 12- to 14-rowed, covered with thick husks; excellent quality. We consider this to be one of the very best extra-early hybrids. We believe that if given a trial on good rich early land this will be a valuable market garden variety. Pkt., 15c; lb., 40c; 2 lbs., 75c; 10 lbs. or over, 30c per lb.

Whipple's Early Yellow Twice the size of Golden Bantam and matures about the same time, grows ears 7 to 8 inches long and 12- to 16-rowed, with often two ears to one stalk. Quality is unequalled. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 22c per lb.

Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 22c per lb.

Stowell's Evergreen The best known and most largely planted of all varieties. The Stowell's Evergreen is hard to beat and for a long time to come many will have it in preference to any other sort. Yields large ears and long, deep kernels, with rich sugary flavor and long keeping qualities. It is the standard late sort. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 22c per lb.

Black Mexican

A popular variety; until the introduction of the Golden Bantam, the sweetest of all. Ears of medium size; kernels large, when ripe bluish black, but at proper stage for cooking, the color shows but little if at all. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 22c per lb.

BEANS *for the Home Garden*

1 lb. will plant 100 feet of drill; 60 to 90 lbs. will plant an acre.

Beans succeed best in warm, light soil of at least average fertility. In this latitude it is not usually safe to plant much earlier than the middle of May. If planting is made earlier and is followed by especially wet or cold weather, the planter should not blame the seedsman if beans fail to germinate. Plant the dwarf varieties in drills 2 to 3 feet apart, about 2 inches deep, and thin plants 4 to 6 inches apart. Give frequent, shallow cultivation until time of blossoming.

Bountiful Beans

Dwarf Wax or Butter Beans

Black Wax One of the best for a home garden, perfectly stringless and of excellent flavor. Pods are medium size, round and of a clear waxy white color. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

***French Horticultural** The vines are compact and of upright growth; almost always sending out runners to a height of 1½ to 2 feet, but do not climb a pole and are not of sufficient length to affect the bean in any way. The pods when ready to use are a yellowish green splashed with a bright crimson. Very prolific. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

Dwarf Lima Beans

1 lb. will plant about 50 hills.

More hardy than the pole varieties and therefore may be planted earlier. Make rows 2 feet apart and plant the Beans, eyes down, every 2 inches. Cover about 2 inches deep. Thin to 6 inches. Note: In very wet weather Bush Lima Beans will sometimes send out runners about 2 feet long.

Burpee's Improved Bush Lima A distinct strain. The earliest, largest, and the best of all large Limas. This new strain differs from the popular Burpee's Bush Lima in bearing uniformly much larger pods, producing more beans, while both pods and beans are much larger and thicker. While the beans are as large as those of the large Lima, the crop of the Improved is ready for gathering from 8 to 10 days earlier. In quality the beans are equal to any, being thin-skinned, juicy and of fine flavor. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

Fordhook Bush Lima One of the leading varieties of Bush Lima Beans. The plant is of stiffly erect habit, the beans are much larger and of superior quality and even when full size are juicy and of fine flavor. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

Pole or Running Lima Beans

1 lb. will plant about 100 hills.

Seibert's Early Lima The earliest variety; the pods are short and rarely contain more than 4 beans, the total yield compares very favorably with other varieties. Pods are opened easily, owing to the fact that they are very thin. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

King of the Garden Lima Earlier than the Large Lima, and the pods are longer and often contain 5 beans of the largest size. The vine is large and of remarkably vigorous growth and will produce larger pods and bear earlier if only two are allowed to grow to the pole. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

Beans, Pole or Running, Wax Podded Sorts

1 lb. will plant about 100 hills.

Pole Beans require considerable care. They are, when properly grown, of long bearing period, more sensitive to wet and extremes of temperature than the dwarf varieties and should not be planted as early. Set in rows about 4 feet apart, preferably running north and south, allowing about 3 feet between the poles in the row. Plant 6 to 8 beans around each pole and thin to 3 to 4 plants.

Golden Cluster Wax Pods long, broad, thick and fleshy; borne in clusters, creamy white to golden yellow; of best quality. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

These are very attractive, fleshy, stringless and not surpassed in quality. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

Beans, Pole or Running, Green Podded Sorts

Don't Forget—Nod-o-gen for Beans

***Kentucky Wonder or Old Homestead** Pods are borne in large clusters, are of unusual length, nearly round, silvery green; when young, crisp, entirely stringless, of fine texture and flavor. Vine bears early and is very productive. Used only as a string bean. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

Scarlet Runner Largely grown as an ornamental climber; its rapid growth and early production of dazzling flowers make it a favorite for covering screens, walls, etc. It is also of excellent edible qualities, but rarely grown for that purpose. Pkt., 15c; lb., 35c; 2 lbs., 65c; 10 lbs. or over, 27c per lb.

Worcester Mammoth Horticultural This variety, while similar in general character to the Horticultural Pole, is much superior in several ways. The beans, though closely resembling those of the common strain, are much larger. Its strikingly handsome pod combined with its great size are both features of excellence which recommend it. Added to these excellent qualities are those of thrifty, vigorous growth of vine and great productiveness, all making it a variety especially desirable to the market garden. It easily brings a higher price in the market than any other, and is not excelled by any other sort for the home garden. Pkt., 15c; lb., 30c; 2 lbs., 55c; 10 lbs. or over, 24c per lb.

Ross' Dependable Cabbage

1 pkt. produces 250 plants; 1 oz. produces 3000 plants.

The seed we offer is absolutely new stock from the best professional growers. A heavy rich loam, thoroughly cultivated, highly manured and worked deep is most suitable to cabbage. Early cabbage should be planted under glass in March and transplanted 2 feet apart as soon as ground outside can be prepared. For late plants, sow in hills in open ground in May. Transplant in July. Protect against insects with Slug-shot.

Yellows-Resistant Cabbage

The term, "Yellows-Resistant" Cabbage seed, does not necessarily imply that this seed is to be planted only in soil infested with the Yellows or Wilt. Our Resistant seed has a very high germination test, and produces a hardier plant, a surer producer and yields greater tonnage than ordinary commercial strains.

Danish Ballhead "Yellows-Resistant" Pkt., 10c; ½ oz., 30c; oz., 50c.

American Improved Savoy The best of the Savoy type, which should be more largely grown. Pkt., 10c; ½ oz., 30c; oz., 50c.

Copenhagen—Early

***Danish Ballhead** (Ross'). This short-stemmed type is popular on account of the great solidity and weight of the head; it is a strong, vigorous grower, producing large round, compact heads, almost as hard as iron, weighing when trimmed fully one-fourth more than any other cabbage of equal size. In consequence, it keeps in condition until spring. Pkt., 10c; ½ oz., 30c; oz., 50c.

Golden Acre (Danish Grown). An extra early selection of the Copenhagen type, and the earliest of the round-headed cabbages, maturing with Jersey Wakefield. Ross' Selection of Superior Table Varieties

CULTURE. Prefers a deep mellow soil. Sow seed in April for early, or in July for fall crop. Sow seed one-half inch deep in rows 12 inches apart. Thin out to 3 inches apart. Seed planted early in the spring will quickly produce plants from which cuttings may be made all summer, as you can cut right down to the ground and new shoots will spring up and make a fast growth, while those plants which are allowed to grow on without any cutting will make large, curly leaves, with thick, light colored mid-ribs which are delicious when cooked and served like asparagus. CUCUMBERS *for the Home Garden*

One packet of seed will sow 15 hills, 1 ounce 50 hills.

The Cucumber requires well enriched soil, and should not be planted until settled warm weather; in this latitude, seldom before the middle of May. Plant the early, small kinds in hills $3\frac{1}{2}$ to 4 feet apart, the larger varieties 5 to 6 feet. Make the hills broad, use 15 to 20 seeds to the hill, dropping them well apart. Cover with not over an inch of earth, and firm this well with the hoe. If the young plants are attacked by the striped bugs or other insects, dust frequently with air-slacked lime, soot or ashes mixed with road dust, taking care that too much is not used at a time. When all danger from bugs is past, thin to three plants to the hill. Give frequent shallow cultivation as long as vines will permit.

***Colorado** This cucumber grows about 12 inches long and about 3 inches in diameter. The color is dark green. It is just a little shorter than Longfellow and far more prolific. We think it will be one of the leading varieties from now on. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 60c.

Boston Pickling For pickling. Its fruit is short, pointed at each end, productive and of superior quality. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c.

***Early Fortune** The plant is early, very vigorous, with an exceptionally heavy, thick foliage and is almost disease-resistant and very productive. Fruits are uniformly nine inches long, slightly tapering toward each end, perfectly round and of a very dark green color which does not fade in shipping; flesh very thick, firm and crisp, and exceedingly small seed cavity. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c.

Extra Long or Evergreen White Spine Vine productive and comes into bearing soon after the Early White Spine. Popular with market gardeners. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c.

Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c.

Improved White Spine Perfection has been attained in this improvement in the White Spine family. It is early, prolific, and produces a continuous crop of uniformly large and symmetrical fruits, faintly marked with light yellowish shading toward the tip. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c.

LETTUCE

Indispensable for Salads and Garnishing

An ounce will produce from 3000 to 4000 plants.

Lettuce thrives on nearly all soils, but because the growth should at all times be rapid to insure crispness and best flavor, the soil should be heavily enriched and well worked before planting. Lettuce being quite hardy, seed may generally be sown as soon as ground can be fitted, as while prolonged or continued freezing will kill the plants, they are but little injured by an ordinary frost. Seed may also be sown in hotbed in gentle heat, and the plants, if well hardened by having been often exposed to the air, may usually be set in the open ground very soon after the time suggested for sowing outdoors.

★Black-Seeded Tennisball More extensively grown in New England than any other variety, both for first outdoor crop and for main crop, the medium sized heads being the size most liked by gardeners, while its compact form allows it to be grown more closely together than others. Pkt., 10c; ½ oz., 20c oz., 30c; ¼ lb., 75c.

Green-Leaved Big Boston A cabbage butter head; medium size; medium green. Is practically the same as Big Boston with no tint of brown and the head is of a whitish green. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

Black-Seeded Simpson Much larger than the preceding, but not so much curled. Forms a large, loose cluster of leaves rather than a head; leaves light yellowish green. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

Crisp as Ice A midsummer variety, surpassing all of this class in crispness, tenderness and fine flavor. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

Big Boston White Seeded Probably the most generally used in cultivation. It is a cabbage-head, butter type, medium large, finely shaped, globular, medium light green with slight tinge of brown on margins of outer leaves. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

Early Curled Simpson (White-seeded.) An old variety, with broad, often frilled, very curly, light green leaves; sweet, tender, of fine flavor. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

Grand Rapids One of the easiest varieties of lettuce to grow. It forms no head but produces an abundant crop of pale green leaves, slightly but closely crumpled which have an excellent flavor. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

Hanson An old variety of great merit. Large, flat, cabbage-like head, very slow to run to seed. The outer leaves are bright green, with veins of lighter shade, inner leaves white, usually curved and twisted at the base. Grown for home use. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

★Iceberg The unusual solidity of the heads is insured by the large white main ribs of the leaves, each of which curving strongly into the center, acts like a truss, making it impossible for the leaves to open outward and expose the center, which is consequently thoroughly blanched. The leaves are always crisp and tender. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

New York No. 12 (Dark Iceberg)

May King A very hardy variety of foreign origin, which owing to its hardiness, earliness and large size for a variety of this class, is coming rapidly into favor here, both for outdoor planting and for forcing. Forms compact heads, nearly, if not quite, as early as White-Seeded Tennisball. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

Imperial No. 847 (Long Standing Iceberg). This fine lettuce will do well in spring and fall, and is outstanding as a summer heading variety, even during hot weather most every plant will produce a fine solid head. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

★New York No. 12 (Dark Iceberg). Delightful to the eye—crisp, excellent quality. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

Prize Head A large, loose-leaved variety, which has been very popular for home use. Leaves very thin, crimped, bright green tinged with brownish red; sweet, tender and of good flavor, but not equal to Crisp as Ice. Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 75c.

1 pkt. will sow 50 ft. of drill; 1 oz. about 200 ft.; 4 to 5 lbs. per acre.

Onions are very healthful and wholesome, probably used more often in the kitchen than any other vegetable, either in connection with other foods for seasoning or in many of the delicious ways to prepare them for their own tempting goodness. Highly prized for their tonic qualities, and doctors everywhere recommend the use of onions in the diet because they are wholesome and nutritious.

Onions are not hard to grow. They like a clean, rich soil. Sow as early as possible in drills 1 foot apart.

Ailsa Craig Of mammoth size, larger than the Prizetaker, oval-shaped, pale straw colored skin; of very mild flavor. Extra large onions can, however, be obtained by sowing seed early in the spring in the hotbed and transplanting to the open ground. Pkt., 10c; ½ oz., 30c; oz., 50c.

Good Garden Peas Sweet and Tender Varieties

Peas, Giant Podded Hamper

Inoculate This Seed With NOD-O-GEN.

One lb. will plant about 100 ft.; 70 to 85 lbs. an acre.

Peas of the extra early, smooth class are first to be planted in the spring. The wrinkled sorts follow later, as they are not quite so hardy. The tall, late varieties need brush, wire or some other support. Though light, warm soil is desirable for the extra early varieties, peas generally produce a much larger crop on soil which is moderately heavy.

Plant the early and dwarf varieties in drills $2\frac{1}{2}$ feet apart and 3 or 4 inches deep, cover with only 1 inch of soil and fill the trench gradually as plants grow. Plant the taller and later varieties in rows 3 to 4 feet apart and 5 to 6 inches deep, covering as already suggested. The tall, late varieties, plant in double rows.

POTATOES

Certified Maine Grown

Obtainable from April 1st to June 1st

Green Mountain Improved

Chippewa★

A Companion Potato with Green Mountain.

The Chippewa is a recent introduction of the United States Department of Agriculture. It is a high yielding Potato, highly resistant to mild mosaic. It has a velvety white skin with very shallow eyes; regular in outline, oblong to elliptical in shape. It matures earlier than the Green Mountain and other late maturing varieties. It consistently produces an attractive tuber with a very high percentage of No. 1 Potatoes. A distinct advantage possessed by the Chippewa is its maturity before the usual time of digging the late crop. While it is not classed as an early variety, it matures somewhat earlier than Green Mountain and other late maturing varieties. 100 lbs., \$2.20; 60 lbs., \$1.50; 30 lbs., 85c; 15 lbs., 50c.

Culture. Cut the seed into pieces, having 2 or 3 eyes. Plant in furrows 3 feet apart and 12 to 15 inches apart in the row. One peck of potatoes should be sufficient to plant 75 to 100 hills; 10 to 14 bushels are required to plant an acre. Potatoes do best on new soil and will respond generously to fertilizer applications. Cultivate by bringing the soil well up around the plant. Spray or dust the plants for insects and blight.

Green Mountain Improved★

The most popular Potato in the world; ideal for Maine crops, and excellent for baking. A dependable winter keeper.

A reliable medium late Potato that is so popular in some sections it has superseded all other main crop varieties. It seems to thrive in all soils and in all localities, making heavy, healthy vines and yielding big crops of large, smooth white thin tubers of handsome flattish oval form. They cook white, dry and mealy.

This Improved Green Mountain is approved and recommended by Ross Brothers.

Maine Certified Seed: 100 lbs., \$2.10; 60 lbs., \$1.45; 30 lbs., 80c; 15 lbs., 45c.

Irish Cobblers

An early, white-skinned variety, very short, thick, inclining to round. This is yearly increasing in popularity for the early market. Ready for market about ten days earlier than the Early Rose; tubers are uniformly larger and in average production of large crops it is not equaled by any of the extra early varieties, nor greatly surpassed in yield by any of the main crop varieties. The vine is very stocky and vigorous, not as liable to be affected with blight or to suffer by drought as most others. A dependable early variety. Maine Certified Seed, 100 lbs., \$2.10; 60 lbs., \$1.45; 30 lbs., 80c; 15 lbs., 45c.

Katahdin

The Long Keeping Potato.

Originated by the U. S. Department of Agriculture and promising to become the outstanding late Potato for market or storage. It was originated in Maine, by double crossing unnamed seedlings of Rural New Yorker No. 2 and Aroostook Wonder parentage. It was bred for disease resistance, quality and yield. During the eight years it was under observation, it has been entirely free from mild mosaic. In yields it has constantly surpassed Rural New Yorker or Green Mountain. The tubers are smooth, short, elliptical to roundish, and have few, very small eyes. The crisp white flesh has a distinct desirable cooking quality which appeals to the housewife. Maine Certified Seed, 100 lbs., \$2.10; 60 lbs., \$1.45; 30 lbs., 80c; 15 lbs., 45c.

FORMALDEHYDE

Prevents Potato Disease and Insures a Clean Healthy Crop.

Directions for treatment of potatoes for common scab, black scurf or rhizoctonia, and black leg, cold method:

Soak the uncut tubers 1½ hours in solution of one pound formaldehyde in 30 gallons of water. If tubers are first dipped in or sprinkled with water, then covered with burlap sacks to keep them moist for a day or two before treatment, soaking period may be decreased to one-half hour and the effectiveness increased. See page 68.

Radishes - Tender - Crisp - Easy to Grow

Crimson Giant

variety for forcing. Our seed is of the very finest strain grown from transplanted roots and will be found unsurpassed. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c; lb., \$1.25.

An ounce will sow 100 feet of drill.

The secret in growing good Radishes consists chiefly in the observance on the part of the grower of three points. First, they should be grown on light quick soil. Second, they should be given plenty of water, and last, but by no means least, the right kind of seed should be sown. For the first crop sow as early in spring as ground can be worked, and every two weeks throughout the season.

A warm, sandy loam, made rich and light by strong manure, is best. Sow in drills 10 to 12 inches apart. The winter varieties should be sown in July and August. One ounce will sow 100 feet of drill, 8 to 10 pounds per acre.

***Early Scarlet Globe** A very early globe-shaped Radish suitable for open ground. The Radishes are of handsome shape, attractive bright red, and are crisp, solid and of the finest quality. Early Scarlet Turnip A small, round variety, with small tops; quick grower. Popular for forcing and outdoors. Deep scarlet. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c; lb., \$1.25.

Early Scarlet Turnip White Tipped. Root nearly round, slightly flattened at bottom, bright scarlet with tip of clear white, early and attractive; suitable for forcing and outside planting. Pkt., 10c; oz., 20c; $\frac{1}{4}$ lb., 50c; lb., \$1.25.

Good Garden Tomatoes *Fresh Crop Seed*

Bonny Best, A Fine, Extra-Early Variety

Marglobe Is Wilt-Resistant

A small plot will grow plenty of Tomatoes

Tomatoes are to be found in every garden. They are easily grown and can be used in so many different ways. It is well to grow an early as well as a main-crop, whether they are for home use or market. The main crop is, of course, more desirable for canning.

CULTURAL DIRECTIONS

An ounce will produce about 2,000 plants.

Tomatoes do best on light, warm, not over-rich soil. Sow in hotbed or window-box (where 60 degree Fahrenheit is the minimum night temperature) in March, in rows 3 inches apart and $\frac{1}{2}$ inch deep. Cover firmly. Later sowings may be made to the end of April. When seedlings are 3 inches high, transplant 4 inches apart each way in hotbeds, cold frames, or singly in 3-inch pots. Harden plants by exposing to the air occasionally. After warm weather is settled, set out plants 3 to 4 feet apart each way in hills, into each of which fertilizer has been previously mixed. Water freely at time of transplanting and shelter from sun until plants are well established.

Acme Vine hardy and productive. Fruit in clusters of four to five, round, smooth and of good size; flesh solid and of excellent flavor. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Beauty Fruit large, very smooth, excellent flavor, color purplish pink. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

***Bonny Best** Large size tomatoes, bright scarlet in color. Excellent variety for the canner as it yields from 12 to 15 tons to the acre. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Comet An excellent greenhouse sort, heavy yielder. Pkt., 10c; $\frac{1}{2}$ oz., 35c; oz., 60c; $\frac{1}{4}$ lb., \$2.00.

Dwarf Champion Dwarf, compact, upright growth. Fruit smooth and solid. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Dwarf Stone The best of the large fruited dwarf tomatoes. Fruit very red and smooth. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Golden Queen Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

***John Baer** The rich, scarlet-red fruits are thick and slightly flattened at the top; smooth, firm and of medium large size. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Michigan State Forcing New wilt-resistant variety. Fruit deep red, globular, and of excellent quality. A good forcing variety. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

***Marglobe** Resists rust and wilt. Almost round; of large size and bright red color. It is one of the most productive tomatoes in cultivation. Marglobe is early and continues bearing over a long period of time. It possesses a delicious flavor, and the tenaciousness of its skin minimizes cracking of the fruit. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Mingold Early, heavy fruiting yellow tomato. The season of Bonny Best with shape and size of Marglobe. Fine for juice. Pkt., 25c.

Ponderosa A large smooth tomato. Color, deep purple. The fruit is exceptionally solid, with few seeds and is quite free from acid. Ideal for shipping. Pkt., 10c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{4}$ lb., \$1.50.

***Pritchard** A great advance in the early class. Ripens with Earliana and ahead of Bonny Best. A cross between Marglobe and Cooper's Special. Good size, intense scarlet, solid, almost no core, small seed pockets; valuable for both market and home garden. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Rutgers Wilt-resistant. Has thick outer and inner walls of solid meat. It is globe-shaped, scarlet-red in color, resembling Marglobe. Ripens first in the center of the fruit so that when red on the outside, the tomatoes are ripe all through. Rutgers is in great demand for all purposes. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Sparks' Earliana A deep red tomato. The vines are compact in growth, with short, close-jointed branches. Extra early and the best so far produced. Very productive. Fruit fair size and firm. Ripens 108 days from date of sowing seed. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Stone Vines vigorous and productive; fruit large, smooth, deep red in color, and heavy. The best all around variety where earliness is not important. Pkt., 10c; $\frac{1}{2}$ oz., 25c; oz., 40c; $\frac{1}{4}$ lb., \$1.25.

Red Plum (Italian). Pkt., 10c.

Yellow Plum Pkt., 10c.

Yellow Husk or Strawberry Pkt., 10c.

Have You Ever Grown Small Fruited Tomatoes—Decorative and Delicious

Dependable Table Turnips

An ounce will sow 200 feet of drill. If sown in drills, one pound is required for an acre; if sown broadcast, less seed is sufficient if sown evenly.

Culture. For early, sow seed of flat varieties in open ground in spring in drills one foot or more apart, using seed sparingly. Thin to 3 or 4 inches apart. For succession, sow every two weeks until June. For fall and winter, sow in July and August. A good crop may often be grown by scattering seed thinly in the corn-field at last cultivation. For Rutabagas, sow seed in seed-bed in spring and transplant to good warm soil in rows at least 2 feet apart and 8 to 10 inches apart in the rows, or sow in open ground during June and early July. Take up roots just before winter, top and store in cool cellar, or pit outdoors.

Early White Milan Roots flat, smooth and symmetrical, pure white. Top very small, upright, and compact, permitting close planting. The earliest and much the best of any extra early white variety. Pkt., 10c; oz., 20c; ¼ lb., 50c.

Early Purple Milan Differs from the preceding in that the roots are not quite so thick and are purple on top. Pkt., 10c; oz., 20c; ¼ lb., 50c.

Early Purple-Top Flat A well-known variety and very extensively grown. Roots smooth, white, with the upper portion purplish red. Pkt., 10c; oz., 15c; ¼ lb., 25c; lb., 75c.

ROSS' EXHIBITION PANSIES

*Bloom Abundantly from Early Spring to Severe Frost
A Lovely, Velvety Assortment of Colors that Endures All Climates*

The Pansy produces best results during the cool days of spring, and in a sandy loam, thoroughly prepared and supplied with well-rotted manure. To assist germination by retaining moisture, cover the seed bed with sheeting or single burlap, removing as soon as seedlings begin to appear. From this time on it is important never to let the soil become dry; to do so is fatal. Keep moist but not soaking wet. For early spring flowers, sow seed in August and protect during the winter.

Ross' Strong and Durable Fences

Our general purpose farm fence is the 1047x12, and the dimensions contained in the figures below are explained as follows: Figure 10 represents the number of horizontal wires, 47 represents the height in inches, and 12 represents the distance apart of the upright bars. The top bars are No. 9 wire, the bottom No. 10, and the intermediate bars and stays No. 11 wire. This makes an ideal up-to-date farm fence, strong enough for any use. It is heavily galvanized and will last for years and is much more sightly than the old ramshackle stone walls or wooden fences. When this fence is used in connection with steel posts, all of the weeds, etc., can be burned right up to the fence, which is another great advantage in keeping the field entirely free from refuse matter.

We have good stock on hand at all times of the following numbers:

1047x12, 20 rods	\$11.85
